

Ground Water Resources

The Company has ground water sources at the “Blanche Banques” boreholes located in St Ouen’s Bay. There are 5 boreholes, which range in depth from 13 to 17 metres, extracting water from the sand aquifer that lies underneath the sand dunes along the coastline.

Rainfall on the higher ground surrounding the sand dunes collects in the aquifer from where the water is pumped into Val de la Mare Reservoir.

Technical Facts

Location	Year Constructed	Location	Yield Megalitres/day	Water feeds into
Blanche Blanches Boreholes	1970 - 1974	St Brelade	1.0 MI/d	Val de la Mare
