

3 The Water Quality Monitoring Team

The Laboratory staff

Water samples ready for testing

Jersey Water has a modern and comprehensive water quality monitoring laboratory facility at Millbrook Depot, St Lawrence.

The laboratory is managed by David Mayman, a Chartered Chemist and a Member of the Royal Society of Chemistry with 20 years experience in the water supply industry. Other members of the team are; Assistant Analyst Anna Powell, Laboratory Technician Sarah Gavey and Samplers Keith Quemard, Bob Langford and Edward Huchet. The samplers are responsible for the collection of all water samples and attending customer homes to answer any water quality queries that may arise as well as carrying out preparatory work in the laboratory.

The water quality laboratory is a modern and purpose designed facility, consisting of a preparatory room with auto-claves for sterilisation of sample bottles and equipment, a bacteriological laboratory and chemical laboratory. The laboratory uses membrane type technology for bacteriological testing, which is a highly sensitive analytical process.
